DSV VIRUPAKSHA VEGI

Software Engineer | Full Stack & Applied AI

Rajahmundry, Andhra Pradesh, India | +91 9154747465 | virupakshavegi123@gmail.com | LinkedIn | GitHub

PROFESSIONAL SUMMARY

Software Engineer with 2+ years at Bitcoin.com building high-traffic full-stack products across legacy Gatsby.js, React and GraphQL and modern Next.js, Node.js and Payload CMS architectures. Passionate about applied AI, RAG, machine learning and developer automation, with hands-on experience in scalable APIs, multilingual CMS platforms, production performance, SEO recovery and Web3 wallet integrations; familiar with Solidity and Foundry.

WORK EXPERIENCE

Bitcoin.com — Software Engineer L1 | May 2025 – Present

- Consolidated multiple legacy Gatsby.js/React sites across Bitcoin.com into a production Nx monorepo with Next.js, TypeScript, Tailwind CSS, shared SDKs and reusable UI components; integrated Payload CMS, Docker-hosted MongoDB and DeepL localization across 35 languages, and created agentic Claude Code/MCP workflows from issue reporting and Linear tickets through PRs to production releases.
- Partnered with design, SEO and editorial teams to refactor React/Next.js pages and shared components for UI/UX, accessibility and search performance; extended Payload CMS content blocks and editorial features to streamline publishing and improve discoverability.
- Created OneSignal-based newsletter signup and account-linked subscriptions using Stytch OAuth authentication across legacy and migrated sites; transitioned authenticated signup, preferences and unsubscribe flows to in-house AllSignals APIs with server-side credentials, session checks, rate limits, feature flags and tests.
- Investigated organic traffic declines following Google AI Overviews; partnered with external SEO agencies and internal SEO, QA and engineering teams to achieve an approximately 10% recovery in organic traffic through indexing, sitemap and technical SEO fixes across Gatsby.js and Next.js sites. Configured GTM/GA4 events and consent-aware tags; traced production errors, stack traces, APM metrics, Core Web Vitals and crawler issues using New Relic, Vercel and Search Console to validate fixes.
- Improved Bitcoin.com News frontend pages and reusable content components for performance, UX and SEO; occasionally supported English/multilingual WordPress backends with PHP/API updates and editorial fixes.
- Supporting the ongoing News platform migration by matching legacy WordPress API/feed responses, preserving multilingual SEO and Wallet compatibility, and adding regression tests.
- Shipped features for Bitcoin.com's Swift-based iOS wallet, integrating external buy/sell, swap and payment providers; validated transaction flows on testnets.

Bitcoin.com — Junior Full Stack Developer Intern | May 2024 – May 2025

- Redesigned and maintained high-traffic React/Gatsby.js and GraphQL-powered Bitcoin.com, News, Games and Wallet properties; shipped homepage, directory, gambling, referral, newsletter and research experiences.
- Architected and launched BitSpinCasino, delivering its user-facing experience from initial development to release.
- Implemented geo-aware Buy/Sell widget rendering via APIs and Python scripts for multilingual translation, rephrasing and content cleanup; resolved cross-repository defects with design, DevOps and content teams.

Intellicuria — Full Stack AI Intern | Dec 2023 – Feb 2024

- Designed responsive React/TypeScript interfaces and Express.js REST APIs; fine-tuned deep learning and NLP models using medical-domain data to support intelligent application features.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, SQL, PHP, Java, C++
Full Stack: React, React Native, Flutter, Next.js, Gatsby.js, GraphQL, Redux Toolkit, Tailwind CSS, HTML/CSS, SCSS, Node.js, Express.js, FastAPI, REST APIs, MongoDB, MySQL, Payload CMS, WordPress, Spring Boot
AI/ML: RAG, LLMs, Transformers, LangChain, LangGraph, TensorFlow, Keras, scikit-learn, NumPy, Pandas, Matplotlib, NLP, deep learning, classification, clustering, regression, MLOps; agentic coding, Claude Code
Cloud & Tools: AWS S3/Lambda (integration/exposure), Docker, Nx, Git, Vercel, GTM, GA4, Google tag/Consent Mode, Google Search Console, New Relic, Sentry (error tracking), MCP, Selenium, Maven
Web3: Bitcoin wallet/swap integrations, Solidity smart contracts, Foundry development tools (limited hands-on use)

PROJECTS

Potato Disease Prediction | Python, TensorFlow, Keras, FastAPI, React

- Trained and deployed image-classification inference for potato-leaf diseases with a FastAPI backend and React upload/prediction UI.

Gym Workout Tracker | React, Node.js, Express.js, MongoDB, JWT

- Designed a full-stack workout tracker with authenticated accounts and secure workout CRUD workflows.

React YouTube Clone | React, Material UI, Tailwind CSS, RapidAPI

- Integrated video browsing, category navigation and search using external APIs; deployed on Netlify.

EDUCATION

Bennett University, Greater Noida | B.Tech, Computer Science & Engineering | 2025 | CGPA: 9.23/10
Sri Shirdi Sai Junior College | Class XII (Mathematics, Physics & Chemistry) | 2021 | 92.7%
